Index to Volume 42 (1994) According to the INCE Classification of Subjects

05.2 Book reviews

Industrial Noise Control. — Paul N. Cheremisinoff, Author; George C. Maling, Jr., Reviewer; **42** (1), 36.
Noise Control in Buildings. — Cyril M. Harris, Editor-in-Chief; Edward M. Clark, Reviewer; **42** (2), 85–86.
Industrial Noise Control: Fundamentals and Applications (2nd Edition). — Lewis H. Bell and Douglas H. Bell, Authors; J. Adin Mann, III, Reviewer; **42** (3), 127.
Vibrations of Shells and Plates. — Werner Soedel, Author; Eric E. Ungar, Reviewer; **42** (4), 158.
Noise: Its Measurement, Analysis, Rating, and Control. — J. S. Anderson and M. Bratos-Anderson, Authors; Richard J. Peppin, Reviewer; **42** (5), 193–194.
Handbook of Environmental Acoustics. — James P. Cowan, Author; Arno S. Bommer, Reviewer; **42** (6), 213.

11.4 Noise generation by air-moving and distribution devices

Historical developments in the control of noise generated by small air-moving devices. — George C. Maling, Jr.; **42** (5), 159–169.

12.5.1.2 Sound sources for a portable electric drill

Study of portable electric drill noise. — Masayuki Yokoi and Mikio Nakai; **42** (4), 129–136.

13.1.4 Helicopter sound sources

Influence of source acceleration on sound-pressure signals. — Jeffrey J. Kelly and Mark R. Wilson; **42**(3), 87–94.

13.1.5 Sources of external aircraft noise

A large hemi-anechoic enclosure for community-compatible aeroacoustic testing of aircraft propulsion systems. — Beth A. Cooper; **42**(1), 1–7.

14.5.3 Noise from electric power station equipment

Experimental study of measures to reduce noise radiated from power-station exhaust stacks. — Erkki A. Björk; **42**(5), 171–178.

24 Sound propagation in the atmosphere

A revised statistical analysis of blast sound propagation. — Paul D. Schomer and George A. Luz; **42**(3), 95–100.

25.3 Diffusivity of sound in enclosed spaces

A measurement system and method to investigate the directional characteristics of sound fields in enclosures. — R. W. Guy and A. Abdou; **42**(1), 8–18.

26 Sound propagation in ducts

High-frequency acoustic radiation from a curved duct of circular cross section. — Serge Lévy; **42**(6), 195–202.

36.4 Active noise reduction in hearing protection devices

Narrow-band digital active noise reduction in a siren-cancelling headset: Real-ear and acoustical manikin insertion loss. — John G. Casali and Gary S. Robinson; **42**(3), 101–115.

38.2 Active noise control

Adaptive algorithms and experimental verification of feedback active noise control systems. — Sen M. Kuo and Dipa Vijayan; **42**(2), 37–46.
Active control of road noise inside vehicles. — Trevor J. Sutton, Stephen J. Elliott, A. Malcolm McDonald, and Timothy J. Saunders; **42**(4), 137–147.

42 Vibrating surfaces and structures

Coupled finite element analysis of Sea Chest vibration. — L. E. Gilroy; **42**(1), 19–24.

51 Building noise control

Fifty years of "Development" in sound insulation of dwellings. — Tor Kihlman; **42**(2), 47–52.

52.3 Community noise control: Road traffic noise

Vehicle-noise-emission limits—Influence on traffic noise levels past and future. — Truls Berge; **42**(2), 53–58.

63.1 Psychological effects of noise: Loudness

Laboratory study of sonic-boom shaping on judged loudness and acceptability. — Jack D. Leatherwood and Brenda M. Sullivan; **42**(2), 59–69.
A comparative study of Zwicker's method for calculating the loudness of continuous sounds. — Daniel A. Quinlan; **42**(3), 117–126.

66.1 Community reaction to noise

Community annoyance and sleep disturbance: Updated criteria for assessing the impacts of general transportation noise on people. — Lawrence S. Finegold, C. Stanley Harris, and Henning E. von Gierke; **42**(1), 25–30.

69.1 Criteria and rating of noise for acceptable levels in rooms

Annoyance caused by constant-amplitude and amplitude-modulated sounds containing rumble. — John S. Bradley; **42**(6), 203–208.

69.3 Criteria and rating of noise for annoyance

Human and community response to military sounds: Results from Field-laboratory tests of small-arms, tracked-vehicle, and blast sounds. — Paul D. Schomer, L. Ray Wagner, L. Jerome Benson, Edmund Buchta, Karl-Wilhelm Hirsch, and Detlef Krahé; **42**(2), 71–84.

69.5 Criteria and rating of noise for land-use planning

New descriptor for high-energy impulsive sounds. — Paul D. Schomer; **42**(5), 179–191.

72.3 Sound intensity measurements

A low cost robot for acoustic intensity measurements. — F. Cervera, F. Belmar, and H. Estellés; **42**(1), 31–35.

72.8 Measurements of impulsive sounds

Technical Note: Risk of overload when using a digital audio tape recorder (DAT) to record high-amplitude impulsive sounds. — Torben Poulsen and Bo Lithén Madsen; **42**(6), 209–211.

78 Audiometry, dosimetry, and hearing measurements

Effects of microphone position and azimuthal sound-incidence angle on peak sound pressure level of acoustic impulses. — Lawrence I. Shotland, Martin S. Robinette, and Robert H. Brey; **42**(4), 149–157.

Author Index to Volume 42 (1994)

A

Abdou, A. — A measurement system and method to investigate the directional characteristics of sound fields in enclosures. — R. W. Guy and A. Abdou; **42** (1), 8–18.

B

Belmar, F. — A low cost robot for acoustic intensity measurements. — F. Cervera, F. Belmar, and H. Estelles; **42** (1), 31–35.

Benson, L. Jerome — Human and community response to military sounds: Results from field-laboratory tests of small-arms, tracked-vehicle, and blast sounds. — Paul D. Schomer, L. Ray Wagner, L. Jerome Benson, Edmund Buchta, Karl-Wilhelm Hirsch, and Detlef Krahé; **42** (2), 71–84.

Berge, Truls — Vehicle-noise-emission limits—Influence on traffic noise levels past and future. — Truls Berge; **42**(2), 53–58.

Björk, Erkki A. — Experimental study of measures to reduce noise radiated from power-station exhaust stacks. — Erkki A. Björk; **42**(5), 171–178.

Bommer, Arno S. — *Handbook of Environmental Acoustics.* — James P. Cowan, Author; Arno S. Bommer, Reviewer; **42**(6), 213.

Bradley, John S. — Annoyance caused by constant-amplitude and amplitude-modulated sounds containing rumble. — John S. Bradley; **42**(6), 203–208.

Brey, Robert H. — Effects of microphone position and azimuthal sound-incidence angle on peak sound pressure level of acoustic impulses. — Lawrence I. Shotland, Martin S. Robinette, and Robert H. Brey; **42**(4), 149–157.

Buchta, Edmund — Human and community response to military sounds: Results from field-laboratory tests of small-arms, tracked-vehicle, and blast sounds. — Paul D. Schomer, L. Ray Wagner, L. Jerome Benson, Edmund Buchta, Karl-Wilhelm Hirsch, and Detlef Krahé; **42**(2), 71–84.

C

Casali, John G. — Narrow-band digital active noise reduction in a siren-cancelling headset: Real-ear and acoustical manikin insertion loss. — John G. Casali and Gary S. Robinson; **42**(3), 101–115.

Cervera, F. — A low cost robot for acoustic intensity measurements. — F. Cervera, F. Belmar, and H. Estellés; **42**(1), 31–35.

Clark, Edward M. — *Noise Control in Buildings.* — Cyril M. Harris, Editor-in-Chief; Edward M. Clark, Reviewer; **42**(2), 85–86.

Cooper, Beth A. — A large hemi-anechoic enclosure for community-compatible aeroacoustic testing of aircraft propulsion systems. — Beth A. Cooper; **42**(1), 1–7.

E

Elliott, Stephen J. — Active control of road noise inside vehicles. — Trevor J. Sutton, Stephen J. Elliott, A. Malcolm McDonald, and Timothy J. Saunders; **42**(4), 137–147.

Estellés, H. — A low cost robot for acoustic intensity measurements. — F. Cervera, F. Belmar, and H. Estellés; **42**(1), 31–35.

F

Finegold, Lawrence S. — Community annoyance and sleep disturbance: Updated criteria for assessing the impacts of general transportation noise on people. — Lawrence S. Finegold, C. Stanley Harris, and Henning E. von Gierke; **42**(1), 25–30.

G

Gilroy, L. E. — Coupled finite element analysis of Sea Chest vibration. — L. E. Gilroy; **42**(1), 19–24.

Guy, R. W. — A measurement system and method to investigate the directional characteristics of sound fields in enclosures. — R. W. Guy and A. Abdou; **42**(1), 8–18.

H

Harris, C. Stanley — Community annoyance and sleep disturbance: Updated criteria for assessing the impacts of general transportation noise on people. — Lawrence S. Finegold, C. Stanley Harris, and Henning E. von Gierke; **42**(1), 25–30.

Hirsch, Karl-Wilhelm — Human and community response to military sounds: Results from field-laboratory tests of small-arms, tracked-vehicle, and blast sounds. — Paul D. Schomer, L. Ray Wagner, L. Jerome Benson, Edmund Buchta, Karl-Wilhelm Hirsch, and Detlef Krahé; **42**(2), 71–84.

K

Kelly, Jeffrey J. — Influence of source acceleration on sound-pressure signals. — Jeffrey J. Kelly and Mark R. Wilson; **42**(3), 87–94.

Kihlman, Tor — Fifty years of "Development" in sound insulation of dwellings. — Tor Kihlman; **42**(2), 47–52.

Krahé, Detlef — Human and community response to military sounds: Results from field-laboratory tests of small-arms, tracked-vehicle, and blast sounds. — Paul D. Schomer, L. Ray Wagner, L. Jerome Benson, Edmund Buchta, Karl-Wilhelm Hirsch, and Detlef Krahé; **42**(2), 71–84.

Kuo, Sen M. — Adaptive algorithms and experimental verification of feedback active noise control systems. — Sen M. Kuo and Dipa Vijayan; **42**(2), 37–46.

L

Leatherwood, Jack D. — Laboratory study of sonic-boom shaping on judged loudness and acceptability. — Jack D. Leatherwood and Brenda M. Sullivan; **42**(2), 59–69.

Léwy, Serge — High-frequency acoustic radiation from a curved duct of circular cross section. — Serge Léwy; **42**(6), 195–202.

Luz, George A. — A revised statistical analysis of blast sound propagation. — Paul D. Schomer and George A. Luz; **42**(3), 95–100.

M

Madsen, Bo Lithén — Technical Note: Risk of overload when using a digital-audio-tape recorder (DAT) to record high-amplitude impulsive sounds. — Torben Poulsen and Bo Lithén Madsen, **42**(6), 209–211.

Maling, George C., Jr. — *Industrial Noise Control.* — Paul N. Cheremisinoff, Author; George C. Maling, Jr., Reviewer; **42**(1), 36.

Maling, George C., Jr. — Historical developments in the control of noise generated by small air-moving devices. — George C. Maling, Jr.; **42**(5), 159–169.

Mann, J. Adin, III — *Industrial Noise Control: Fundamentals and Applications (2nd Edition).* — Lewis H. Bell and Douglas H. Bell, Authors; J. Adin Mann, III, Reviewer; **42**(3), 127.

McDonald, A. Malcolm — Active control of road noise inside vehicles. — Trevor J. Sutton, Stephen J. Elliott, A. Malcolm McDonald, and Timothy J. Saunders; **42**(4), 137–147.

N

Nakai, Mikio — Study of portable electric drill noise. — Masayuki Yokoi and Mikio Nakai; **42**(4), 129–136.

P

Peppin, Richard J. — *Noise: Its Measurement, Analysis, Rating, and Control.* — J. S. Anderson and M. Bratos-Anderson, Authors; Richard J. Peppin, Reviewer; **42**(4), 193–194.

Poulsen, Torben — Technical Note: Risk of overload when using a digital audio tape recorder (DAT) to record high-amplitude impulsive sounds. — Torben Poulsen and Bo Lithén Madsen, **42**(6), 209–211.

Q

Quinlan, Daniel A. — A comparative study of Zwicker's method for calculating the loudness of continuous sounds. — Daniel A. Quinlan; **42**(3), 117–126.

P

Robinette, Martin S. — Effects of microphone position and azimuthal sound-incidence angle on peak sound pressure level of acoustic impulses. — Lawrence I. Shotland, Martin S. Robinette, and Robert H. Brey; **42**(4), 149–157.

Robinson, Gary, S. — Narrow-band digital active noise reduction in a siren-cancelling headset: Real-ear and acoustical manikin insertion loss. — John G. Casali and Gary S. Robinson; **42**(3), 101–115.

S

Saunders, Timothy J. — Active control of road noise inside vehicles. — Trevor J. Sutton, Stephen J. Elliott, A. Malcolm McDonald, and Timothy J. Saunders; **42**(4), 137–147.

Schomer, Paul D. — Human and community response to military sounds: Results from field-laboratory tests of small-arms, tracked-vehicle, and blast sounds. — Paul D. Schomer, L. Ray Wagner, L. Jerome Benson, Edmund Buchta, Karl-Wilhelm Hirsch, and Detlef Krahé; **42**(2), 71–84.

Schomer, Paul D. — A revised statistical analysis of blast sound propagation. — Paul D. Schomer and George A. Luz; **42**(3), 95–100.

Schomer, Paul D. — New descriptor for high-energy impulsive sounds. — Paul D. Schomer; **42**(5), 179–191.

Shotland, Lawrence I. — Effects of microphone position and azimuthal sound-incidence angle on peak sound pressure level of acoustic impulses. — Lawrence I. Shotland, Martin S. Robinette, and Robert H. Brey; **42**(4), 149–157.

Sullivan, Brenda M. — Laboratory study of sonic-boom shaping on judged loudness and acceptability. — Jack D. Leatherwood and Brenda M. Sullivan; **42**(2), 59–69.

Sutton, Trevor J. — Active control of road noise inside vehicles. — Trevor J. Sutton, Stephen J. Elliott, A. Malcolm McDonald, and Timothy J. Saunders; **42**(4), 137–147.

U

Ungar, Eric E. — *Vibrations of Shells and Plates.* — Werner Soedel, Author; Eric E. Ungar, Reviewer; **42**(4), 158.

V

Vijayan, Dipa — Adaptive algorithms and experimental verification of feedback active noise control systems. — Sen M. Kuo and Dipa Vijayan; **42**(2), 37–46.

von Gierke, Henning E. — Community annoyance and sleep disturbance: Updated criteria for assessing the impacts of general transportation noise on people. — Lawrence S. Finegold, C. Stanley Harris, and Henning E. von Gierke; **42**(1), 25–30.

W

Wagner, L. Ray — Human and community response to military sounds: Results from field-laboratory tests of small-arms, tracked-vehicle, and blast sounds. — Paul D. Schomer, L. Ray Wagner, L. Jerome Benson, Edmund Buchta, Karl-Wilhelm Hirsch, and Detlef Krahé; **42**(2), 71–84.

Wilson, Mark R. — Influence of source acceleration on sound-pressure signals. — Jeffrey J. Kelly and Mark R. Wilson; **42**(3), 87–94.

Y

Yokoi, Masayuki — Study of portable electric drill noise. — Masayuki Yokoi and Mikio Nakai; **42**(4), 129–136.
